

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0042] in the specification with the following amended paragraph.

Q' [0042] It is sometimes convenient to express a composition (implicitly) in terms of a method to make it. This invention includes compositions that are the product of (made by, prepared by, etc.) any of the methods of the present invention, ~~as well as any preparable by any of these methods. In corresponding claims, the former would be expressed in "product by process" terms, while the latter would be expressed in broader terms ("preparable by") which is broader than "the product of", "made by", "prepared by" or other language of that type. A "preparable by" claim would cover a composition that could be made by the cited method, even if it actually was not.~~
